DESCRIPTORS: *Glass, *Iron alloys, *Nickel alloys,
Plating, Seals, *Electron tubes.

Sealing alloys, free from chromium, capable of being
faultlessly electroplated are used for the glass-metal
envelopes of microwave tubes of soft glass. The new
Fe-Ni-Mn alloy (47/48/5) satisfies these requirements
and its expansion coefficient is closer to that of the
commonly used lead glass than the chromium-free
Fe-Ni alloys used hitherto. (Author)

*Differential equations, Perturbation theory, *Func-
tions, Inequalities, Stability, Theory, Time, Motion.

An analysis is presented on the control system de-
scribed by a differential equation. The problem is to
determine the sufficient conditions for the asymptotic
stability of the trivial solution of the control system
for any finite initial perturbations. Details are given
on the construction of the Lyapunov function. Results
